

CTI-510 Desktop User Interface (DUI)

The Desktop User Interface is intended to provide an easily customized, universal operator control device for use with pan & tilt heads, camera, laser, and antenna systems. It can be interfaced with a PC for control of virtually any application.

Joystick, joystick/keypad, and joystick/keypad/display configurations are available

The keypad can be relabeled for specific applications.

Messages on the 16 character by 2 line backlit display are specific to the application.

Serial interface with the controlled device or PC may be configured as RS-232 or EIA-422/485.

Joystick provides proportional speed control.

Large auxiliary buttons switch to camera or other device control.
